

DIGITAL SKILLS DIRECTORY

Australian
Institute of
Management

The Australian Institute of Management exists, evolves, and excels so that you have the relevant skills to seize the future.

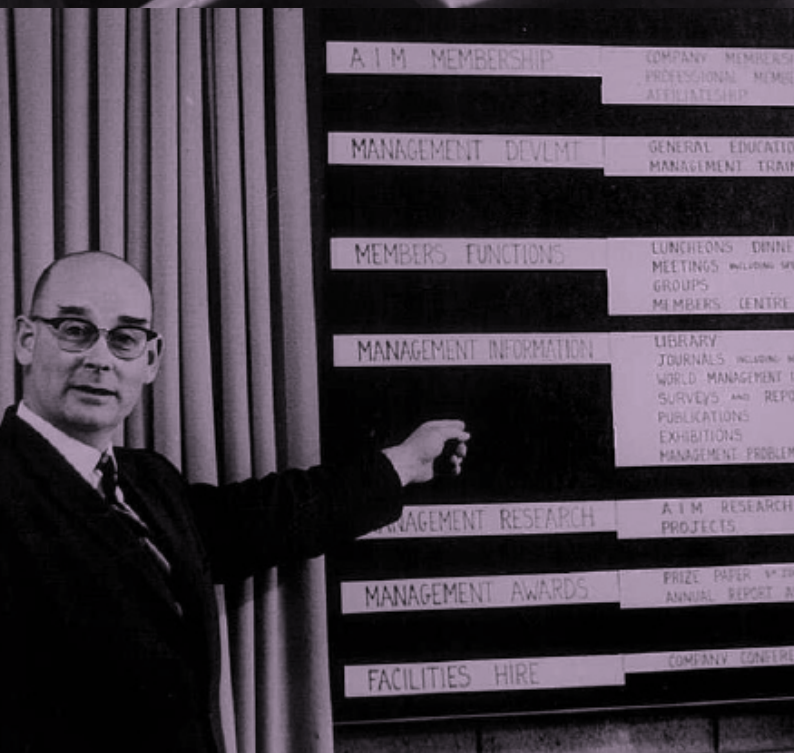

AIM has supported the development of Australians for 80 years and is now unparalleled in empowering current and future leaders. Through this rich history we have learnt one thing above all else: the importance of evolution. The environment we live and work in has shifted dramatically, repeatedly, and will continue to.

So we have evolved as well, from our origins in developing the skillsets of industrial workers in Melbourne to our current portfolio of premier Short Courses, Vocational Qualifications, and Higher Education that is delivered to Australians around the nation.

Our offering has changed, but our ethos hasn't.

Built on experience, powered by evolution, committed to excellence.

**Australian
Institute of
Management**

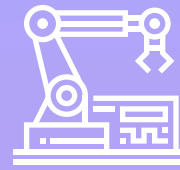

AIM Digital Skills is where professionals, managers and teams build the confidence to improve digital capability in areas such as AI, data, cybersecurity and UX, while strengthening human skills like critical thinking, collaboration and creativity to stay relevant and deliver impact in a fast-changing world.

In today's workplace, digital capability is as important as technical skill, regardless of role or expertise. New technologies reshape how we work, but true value comes when people can combine these tools with human strengths to solve problems and improve outcomes.

To help you stay competitive, AIM Digital Skills offers a portfolio of short courses that blend technical knowledge with practical application. You will learn how to use digital tools in real workplace contexts while also developing the adaptability needed to thrive in any role or industry.

77%

of tech professionals and over half of non-tech workers report gaps in digital capability.

A young woman with blonde hair and glasses is smiling while looking at a laptop screen. She is wearing a dark sweater over a light-colored collared shirt. The background is blurred, showing an indoor setting with warm lighting.

SUPPORTING UNIQUE CAREER JOURNEYS

The development of great leaders does not happen overnight.

All AIM multi-day on-campus short course students now have access to three online courses to bolster their professional skillset as they progress through their individual career journey.

Discover how to effectively drive cross functional projects with Introduction to Project Management, express your thoughts and opinions with confidence and conviction through Effective Communication, or build organisational growth and creative culture with Creative Thinking and Continuous Improvement.

Whatever your specific training needs, AIM students are provided with the tools and future skills to tackle the ongoing challenges of a turbulent and ever-changing business environment.

Creative Thinking and Continuous Improvement (Online)

Be empowered to identify and implement innovations that drive organisational improvement and growth.

Effective Communication (Online)

Explore a range of proven communication techniques and strategies to maintain successful workplace relationships.

Introduction to Project Management (Online)

Effectively manage projects that cross job functions, geographies, and seniority, on time and on budget.

Agentic AI is shifting organisations from AI-assisted work toward operational environments where autonomous systems can plan, adapt and act across workflows. Leaders are increasingly expected to make strategic decisions about autonomy, oversight and accountability while governance approaches and operational controls are still evolving.

Agentic AI for Leaders is a practical leadership course focused on strategic judgement, governance and executive oversight for Agentic AI.

Participants learn structured frameworks to assess organisational readiness, define operational boundaries, strengthen escalation capability and make defensible decisions about deploying, scaling, constraining or withdrawing autonomous systems within organisational workflows.

Learning outcomes

Upon completion of this course you'll be able to:

- Identify where agentic AI autonomy is appropriate based on trust, risk and performance stability
- Define clear boundaries between agentic AI workflows and human authority
- Apply governance and oversight mechanisms that remain effective after deployment
- Utilise observability and escalation frameworks to maintain accountability across agentic AI-enabled workflows
- Evaluate when to deploy, scale, constrain or withdraw agentic AI based on readiness and risk
- Maintain leadership accountability as agentic AI operates across workflows and influences outcomes

Is this course right for you?

This course is designed for senior leaders, executives, operational leaders and functional managers responsible for decisions, workflows or business outcomes influenced by Agentic AI, regardless of technical background. It is suited to professionals such as General Managers, Heads of Department, Operations Managers, Transformation Leaders, Risk and Governance Managers, Technology and Digital Leaders, and senior decision-makers overseeing AI-enabled workflows within their teams or functions.

Included Online Courses

This Short Course also gives you **free access** to the following Online Courses valued at \$4,125:

- Creative Thinking and Continuous Improvement
- Effective Communication
- Introduction to Project Management

As AI continues to transform the workplace, managers face growing pressure to drive innovation and results. The AI for Teamwork short course empowers managers with the knowledge, skills and confidence to lead AI adoption within their teams. This practical, business-focused program will enable you to identify AI opportunities, integrate AI tools into workflows and guide your team through AI-enabled change — without requiring technical expertise. By focusing on leadership, communication, ethical considerations and operational impact, this course bridges the gap between AI strategy and day-to-day team implementation, building readiness for an AI-driven future.

Learning outcomes

Upon completion of this course you will be able to:

- Explain why AI makes your leadership more valuable, not less
- Identify and support different team responses to AI adoption
- Apply a practical framework for AI opportunities and risks
- Create an actionable plan for leading your team's AI journey
- Build confidence in navigating AI transformation whilst maintaining your values

Is this course right for you?

This short course is designed for managers leading teams and projects with multiple stakeholders. It is ideal for those looking to streamline operations, make smarter decisions and confidently adopt AI and emerging technologies.

In an increasingly fast-paced digital world, leveraging AI enables you to use your time more effectively and strategically. The AI for Productivity short course provides you with the knowledge, skills and confidence to leverage AI technologies and concepts to streamline workflows, automate tasks and make better decisions. Through practical, hands-on learning, you will discover how to leverage the power of AI tools to improve your efficiency and better manage your time and tasks. This course makes AI accessible and applicable to your daily life, regardless of your technical background.

Learning outcomes

Upon completion of this course you will be able to:

- Identify which tasks AI can realistically help with
- Apply one core technique for better AI results
- Utilise AI applications with common real-world work scenarios
- Demonstrate effective strategies for interacting with AI tools such as providing clear inputs, refining requests and verifying the outputs
- Explain the importance of fact-checking AI outputs and recognise the role of human oversight in ensuring reliable and high-quality outcomes
- Utilise resources for continuous learning

Is this course right for you?

This course is designed for individuals who want to understand and use AI to improve their daily productivity and efficiency, regardless of technical background.

Projects today move faster and demand more from professionals who manage them. Yet many still rely on manual planning, reporting and risk management that slow delivery and limit accuracy. Without the skills to use AI confidently, opportunities to streamline workflows, predict risks and improve decision-making are often missed.

AI for Project Management is a practical, one-day course that shows you how to apply AI across the project lifecycle. You'll learn to remove the manual effort required in repetitive tasks, enhance planning and generate meaningful insights for reporting and stakeholder engagement. Through hands-on exercises, you'll build the confidence to use AI responsibly and effectively to deliver projects with greater speed, accuracy and impact.

Learning outcomes

Upon completion of this course you will be able to:

- Define the capabilities of AI in project management
- Evaluate AI models for various task across the project lifecycle
- Apply AI to assist in planning, task management, risk tracking and status updates
- Evaluate AI insights to identify project risks, opportunities and bottlenecks for informed decision-making
- Effectively leverage AI for project reporting
- Identify ethical risks, such as AI bias, confidentiality and alignment to make informed decisions

Is this course right for you?

This course is designed for professionals who manage or contribute to projects in any industry. It's ideal for project managers, team leaders and professionals in operations, finance, marketing or HR who want to use AI to improve project planning, reporting and decision-making.

As technology advances, so do vulnerabilities - highlighting the critical importance of cybersecurity skills in protecting organisations, safeguarding data and maintaining the integrity of digital systems.

The Cybersecurity Essentials short course is a foundational program designed for non-technical professionals and business owners. In a world where digital systems are central to work and life, this course equips you with the essential knowledge and practical tools to protect yourself and your organisation from cyber threats.

Grounded in real-world scenarios, the course empowers you to strengthen business security, navigate digital environments with confidence and serve as a frontline defender against common cyber attacks.

Learning Outcomes

Upon completion of this course you'll be able to:

- Identify and describe common cyber threats including phishing, malware and social engineering
- Recognise red flags in scam emails, texts and phone calls
- Apply essential security measures such as two-factor authentication, robust password practices and safe internet usage
- Configure privacy and security settings on devices and accounts
- Understand the CIA triad (Confidentiality, Integrity, Availability) and its role in cybersecurity
- Recognise the risks posed by insider threats and their prevention
- Back up important data and respond to cyber incidents
- Report cybersecurity incidents appropriately, including to relevant Australian agencies

Is this course right for you?

This course is designed for non-technical professionals across all industries who want to learn essential cybersecurity practices and skills to stay safe online, avoid cyber threats and confidently contribute to a more secure workplace.

Data Analytics Essentials

DURATION: 1 Day	DELIVERY MODE: On-Campus or Virtual Workshop	PRICE: \$1,150
---------------------------	---	--------------------------

[BOOK NOW](#)

[DOWNLOAD
COURSE GUIDE](#)

[ENQUIRE NOW](#)

Many professionals still rely on gut instinct, leaving organisations exposed to bias, missed opportunities and inefficiencies. Without data-driven decision-making, businesses risk falling behind in a competitive and fastmoving environment.

Data Analytics Essentials provides you with the core skills to interpret data into meaningful insights that drive business decisions. In this hands-on one-day course, you will learn how to frame business problems, define metrics, prepare data, and use AI-powered tools to identify patterns and trends. You will also practise building visuals and applying data storytelling to communicate findings with impact. By the end of the day, you will be ready to translate data into actionable insights that drive performance.

Learning Outcomes

Upon completion of this course you'll be able to:

- Identify where data analytics adds value and shift decisions from intuition to evidence
- Define business problems and establish meaningful metrics and KPIs
- Apply practical and AI-assisted methods to collect, clean and prepare data for analysis
- Use AI-powered tools to reveal trends and opportunities while addressing data quality and bias
- Create clear visualisations and apply data storytelling to engage different audiences
- Translate insights into actionable recommendations and apply an iterative approach to improve decisions

Is this course right for you?

This course is ideal for professionals who want to move beyond gut feel and make decisions backed by evidence such as Sales, Product, Marketing and Operations. It suits managers, team leaders, team members, project managers, consultants and emerging business leaders (middle managers) who need to interpret reports, shape data questions and communicate insights that drive action.

Designing Workflows for Agentic AI

On-Campus or
Virtual Workshop

PRICE: \$2,080

BOOK NOW

DOWNLOAD
COURSE GUIDE

ENQUIRE NOW

Agentic AI is slowly being introduced into how organisations operate and how work is carried out, yet most current workflows are not designed for how these systems operate. Tasks are given to AI without clear structure or ownership, reviews are often missing, and it becomes difficult to keep track of who is responsible as agentic AI takes a bigger role in getting work done.

Learning outcomes

Upon completion of this course you'll be able to:

- Define how agentic AI reshapes work by distinguishing how systems plan, act and adapt independently compared with traditional automation and generative AI
- Identify and assess operational, ethical and governance risks in agentic AI, including accountability gaps, automation bias and unintended downstream impacts across teams, customers and systems
- Define decision boundaries for AI-enabled workflows by determining which decisions can be delegated, which must remain human led and where accountability cannot be transferred
- Determine which tasks and decisions can be assigned to AI agents and apply constraints as risk, complexity, ambiguity and uncertainty change
- Design end-to-end agentic workflows that integrate AI actions, decision points and handovers, systematically embedding agentic capability within organisational processes
- Construct escalation paths, checkpoints and intervention mechanisms to manage risk and maintain accountability across interacting AI agents, including when systems encounter exceptions, ambiguity or failure modes
- Apply governance and risk management approaches to establish guardrails for monitoring, escalation and ongoing oversight of agentic AI in operation
- Plan how to progress an AI use case from pilot to a governed agentic workflow with clear business outcomes, operating controls and risk management mechanisms

Is this course right for you?

This course is for non-technical professionals who are in positions that influence or contribute directly to the design, management or improvement of workflows where agentic AI is involved. Suitable for operations, product, process improvement and transformation roles.

Included Online Courses

This Short Course also gives you **free access** to the following Online Courses valued at \$4,125:

- Creative Thinking and Continuous Improvement
- Effective Communication
- Introduction to Project Management

Excel For Business: Advanced Formulas and Functions

COURSE DURATION:
1 Day

On-Campus Workshop

PRICE: \$1,150

BOOK NOW

**DOWNLOAD
COURSE GUIDE**

ENQUIRE NOW

Many professionals spend hours fixing spreadsheets because they rely on basic Excel functions. Without advanced skills, analysis becomes slow, error-prone and hard to maintain.

Excel for Business: Advanced Formulas and Functions is a practical, one-day course for experienced Excel users who want to take their skills to the next level.

Through real-world scenarios and hands-on activities, you will learn advanced naming techniques, formula auditing tools, structured references, logical and lookup functions, forecasting tools, dynamic arrays and modern features like LET and LAMBDA. Gain the confidence to tackle complex calculations, streamline analysis and deliver reliable, professional outputs.

Learning outcomes

Upon completion of this course you will be able to use:

- Apply advanced Excel workflow techniques to improve efficiency and accuracy
- Create and manage named ranges to simplify and organise complex formulas
- Use auditing tools to trace, evaluate and troubleshoot calculations
- Build structured references in Tables and apply logical and lookup functions for sophisticated analysis
- Apply Goal Seek and Data Tables to perform forecasting and scenario planning
- Streamline analysis with dynamic arrays, LET and LAMBDA to create reusable solutions

Is this course right for you?

This course is ideal for business professionals with intermediate Excel skills looking to advance their capabilities in dynamic arrays, time-saving formula techniques and advanced logical functions. With focused exercises and applied scenarios, this course will provide you with the tools to make better data driven decisions.

As data becomes central to decision-making, professionals in all roles are realising the value of using Excel to uncover insights, identify patterns and drive smarter outcomes.

This one-day short course equips professionals with the skills and mindset to confidently analyse, clean and interpret data using Microsoft Excel.

You will learn how to frame business questions, navigate the analytics pipeline and apply practical Excel tools to uncover meaningful patterns and trends. Whether you are reviewing performance, solving operational challenges, or informing strategic decisions, this course will help you transform raw data into relevant, actionable insights with confidence.

Learning outcomes

Upon completion of this course you will be able to:

- Identify business questions that can be answered using data analysis
- Translate business challenges into structured, data-driven inquiries
- Clean and prepare datasets using Excel tools
- Use basic Power Query transformations to automate data cleaning and consolidation
- Apply intermediate Excel functions to summarise and analyse data
- Create and interpret PivotTables to identify patterns and trends
- Detect and correct issues related to data bias, quality and structure
- Utilise Excel's AI tools to generate insights more efficiently
- Communicate data insights using structured storytelling techniques that support decision-making

Is this course right for you?

Designed for professionals with a foundational understanding of data analysis, this course is ideal for those who regularly use Excel and want to take their skills further.

Whether you are streamlining workflows, uncovering insights, or preparing reports, mastering Excel unlocks a valuable skill set that is applicable across industries.

This introductory Excel course equips you with the essential skills to manage, analyse and manipulate data effectively for business and professional use.

Through a practical, hands-on approach, you will learn Excel fundamentals - from navigating the workspace and formatting data to using formulas, cleaning and validating datasets and applying foundational techniques for data analysis and visualisation.

Learning outcomes

Upon completion of this course you will be able to:

- Navigate the Excel interface, customise settings and manage multiple worksheets efficiently
- Learn best practices for inputting, editing and formatting data for clarity and readability
- Adjust, insert, delete and freeze panes to keep data structured and accessible
- Use essential formulas, including SUM, AVERAGE, IF, COUNT and LOOKUP functions to calculate and analyse data
- Organise data alphabetically, numerically and by multiple criteria to extract insights easily
- Create and customise bar, pie and line charts to communicate trends and patterns clearly
- Apply validation rules and implement best practices for data integrity
- Discover formatting shortcuts, templates and essential Excel functions to work smarter

Is this course right for you?

This course is ideal for individuals with little to no experience in Excel and want to learn how to manage, analyse and interpret datasets. Designed for professionals with a foundational understanding of data analysis, this course is ideal for those who regularly use Excel and want to take their skills further.

Additional information

Many professionals use Excel to report information, but struggle to present data in a clear and reliable way. Poorly structured worksheets, inconsistent formatting and unsuitable chart choices can make reports difficult to interpret, reducing confidence in business decisions and slowing communication across teams.

Excel for Business: Data Visualisation is a practical course that helps professionals prepare and structure data for visualisation, select effective chart types for different reporting needs and create clear visual reports in Excel. Participants learn how to apply formatting techniques, use conditional formatting and sparklines, and build PivotCharts and dashboards that support clearer communication, stronger reporting consistency and more confident decision making.

Learning outcomes

Upon completion of this course you will be able to:

- Identify core data visualisation principles for creating clear and reliable Excel charts
- Prepare and structure worksheet data for effective charting and dashboard use
- Select chart types that align with common business reporting needs
- Apply Excel tools and functions to create accurate, professional charts
- Use formatting techniques to improve chart readability, consistency and impact
- Create PivotCharts, dashboards and visual elements to communicate data clearly

Is this course right for you?

This course is designed for individuals with foundational Excel skills who would like to transform raw data into meaningful insights using Excel's visualisation tools.

Additional information

COURSE GUIDE**

ENQUIRE NOW

Many organisations and professionals struggle to unlock the true potential of Microsoft Copilot. Licences are rolled out, but without skills in prompting or a clear understanding of how Copilot fits within everyday workflows, adoption remains low and the benefits to productivity and collaboration are lost.

Microsoft 365 Copilot Essentials is a one-day, hands-on course that builds the practical skills to use Copilot confidently and productively across Outlook, Word, Excel, PowerPoint, OneNote and Teams. You will learn to prompt with purpose, manage routine tasks more efficiently and use AI responsibly to produce accurate, high-quality work. By building Copilot into your daily routine, you will strengthen teamwork, save time and create measurable value in your organisation.

Learning outcomes

Upon completion of this course you will be able to:

- Apply Microsoft Copilot across Microsoft 365 applications to streamline communication, automate tasks and improve workflow efficiency
- Use effective prompting techniques to generate accurate and relevant results with Copilot
- Analyse and visualise data in Excel using Copilot to produce faster, more accurate insights for decision-making
- Create engaging presentations in PowerPoint using Copilot to generate content, provide layout suggestions and create speaker notes
- Leverage Copilot to streamline everyday tasks such as summarise meetings, emails, notes and reports using natural language prompts
- Evaluate the ethical, secure and responsible use of Copilot, with a focus on privacy, compliance and governance controls

Is this course right for you?

This course is ideal for professionals, managers and team leaders across HR, finance, operations, marketing and customer service who want to unlock the full potential of Microsoft Copilot across the suite and integrate it into daily workflows to reduce admin, improve efficiency, quality of outputs and collaboration.

What version of Microsoft 365 Copilot license do I need?

To complete the Microsoft 365 Copilot Essentials course, you must have Microsoft 365 Copilot – Business/Enterprise (Add on licence) through your organisation or education provider.

Power BI Advanced Techniques for Business

COURSE DURATION: 2 Day	DELIVERY MODE: On-Campus or Virtual Workshop	PRICE: \$2,080
---------------------------	--	----------------

[BOOK NOW](#)

[DOWNLOAD
COURSE GUIDE](#)

[ENQUIRE NOW](#)

Throughout the program, you will unlock the secrets of data modelling and optimisation, enabling you to leverage Power BI Desktop to design efficient and robust data models that can handle complex business scenarios. You will explore advanced DAX functions, patterns and expressions to solve intricate analytical challenges and leverage the full power of DAX in your calculations. Moreover, you will discover how to push the boundaries of visualisations by creating custom visuals, implementing advanced formatting options and incorporating interactive features.

By the end of the course, you will possess the expertise to create sophisticated data models, perform complex calculations and design stunning visualisations that unveil deeper insights and enable data-driven decision-making at an advanced level.

Learning outcomes

Upon completion of this course you'll be able to:

- Design efficient, scalable data models using advanced Power BI techniques
- Write and apply complex DAX functions to perform sophisticated calculations
- Implement best practices for data modelling and optimisation
- Create custom visuals and utilise advanced formatting options
- Design interactive, visually appealing, and accessible dashboards and reports
- Use advanced visualisation techniques for impactful presentations
- Apply advanced data analysis techniques for deeper insights
- Publish, share and manage reports securely within the Power BI Service
- Collaborate effectively and control access permissions

Is this course right for you?

This course is ideal for Business, HR and IT professionals, middle management and decision makers, researchers, analysts, business Analysts, data analysts and project managers. Anyone who would like to know how to create complex data models, optimise performance, and build sophisticated reports and dashboards.

Prerequisite

Completion of Power BI Fundamentals for Business or equivalent experience.

Included Online Courses

This Short Course also gives you **free access** to the following Online Courses valued at \$4,125:

- Creative Thinking and Continuous Improvement
- Effective Communication
- Introduction to Project Management

Power BI Fundamentals for Business

COURSE DURATION:
1 Day

DELIVERY MODE:
On-Campus or

**DOWNLOAD
COURSE GUIDE**

ENQUIRE NOW

This one-day course is designed for beginners who want to embark on their journey of mastering Power BI, a powerful business intelligence tool. You will use a business case study to gain a solid understanding of the core concepts and functionalities of Power BI, enabling you to transform raw data into compelling visualisations and insightful reports.

You will learn about essential visualisation best practices, customising visual properties and adding interactivity through filters and slicers. By the end of the course, you will have the skills to create professional-looking reports and dashboards that bring your data to life and empower data-driven decision-making.

Learning outcomes

Upon completion of this course you'll be able to:

- Understand the fundamental concepts and benefits of Power BI
- Navigate and utilise the Power BI Desktop interface effectively
- Connect to various data sources and import data into Power BI
- Apply data transformation and cleansing techniques using the Power Query Editor
- Establish relationships between tables and learn to use DAX measures for data modelling and calculations
- Design visually compelling and interactive reports using a variety of visualisation types

Is this course right for you?

Suitable for anyone who wants to get started with data analysis and visualisation using Power BI, and set the stage for further growth and exploration in the world of data-driven decision-making, regardless of their background or current job role.

1 Day

DELIVERY MODE:
Virtual Classroom

PRICE: \$1,150

BOOK NOW

**DOWNLOAD
COURSE GUIDE**

ENQUIRE NOW

Between overflowing inboxes, constant meetings and scattered files, it's easy to feel like your digital tools are running you, not the other way around. Many professionals rely on Microsoft 365 but only access a small part of its potential. Without the right practical know-how to manage these tools, individuals and organisations struggle to work efficiently and collaborate effectively.

The Productivity with Microsoft 365 Tools short course is a hands-on, one-day program for professionals who want to stay organised and improve workflow. You will learn ways to use of Outlook, Teams, OneNote, SharePoint, To Do and OneDrive in combination to manage information and collaborate efficiently. In addition, you'll explore the free version of Microsoft's Copilot Chat to support content creation and enhancement, helping you work smarter and more creatively.

Learning outcomes

Upon completion of this course you'll be able to:

- Confidently navigate the Microsoft 365 ecosystem and use its tools in tandem to boost daily productivity and collaboration
- Apply time-saving features in Outlook to manage emails, calendars and tasks
- Use Microsoft To Do and productivity strategies to prioritise and track daily work
- Organise notes, projects and research effectively using OneNote
- Collaborate on files and manage shared content with SharePoint, OneDrive and Teams
- Develop a personal workflow system using Microsoft 365 and Copilot Chat (free version) to streamline work and key tasks

Is this course right for you?

This course is designed for professionals and organisations looking to improve productivity and collaboration using Microsoft 365. It's ideal for those seeking practical, hands-on training with real workplace application, building lasting capability to use Microsoft 365 tools with confidence, strengthen team performance and support long-term productivity gains.

Delivery Mode

This course is delivered online through virtual classrooms where facilitators and students can present course materials, engage and interact with one another and work in groups together. Sessions are hosted on Zoom, providing a live, synchronous setting with a facilitator and a support co-host.

The key benefits of virtual study include being time efficient, with content delivered in bite-sized chunks, the ability to participate from any location and the capability to be recorded for later review.

Responsible AI Leadership

COURSE GUIDE

ENQUIRE NOW

Responsible AI Leadership is a practical, two-day, facilitator led course that equips leaders with structured decision frameworks to determine AI's role in workflows, assess organisational readiness and exposure, evaluate AI-assisted outputs and establish practical guardrails.

Participants build the capability to own and defend AI informed decisions while introducing and fostering AI enabled work responsibly.

Learning outcomes

Upon completion of this course you'll be able to:

- Identify the leadership and organisational problems AI is being asked to solve, determine the appropriate role for AI in each context, and evaluate how AI changes leadership responsibility and accountability
- Define and articulate a clear leadership position on responsible AI adoption aligned with organisational strategy and risk appetite
- Analyse AI readiness, risk and exposure across teams and workflows to identify capability gaps and unmanaged use
- Evaluate AI-assisted outputs for accuracy, bias and reliability, determine the appropriate level of human oversight and communicate these judgements to build shared capability
- Clearly own and defend AI-assisted decisions by explaining how AI was used, how outputs were validated and why the chosen level of reliance was appropriate
- Design and implement practical AI guardrails within everyday workflows so policy intent translates into clear team expectations
- Evaluate AI-related failures or incidents and apply containment, escalation and corrective action to reduce repeat risk

- Apply change leadership practices to introduce AI-enabled work while maintaining trust, psychological safety and accountability

Is this course right for you?

This course is for leaders responsible for decisions and outcomes influenced by AI in their teams or functions regardless of technical background. It suits those working where AI shapes or could shape daily operations with evolving or unclear guardrails, requiring them to guide AI use, exercise judgment and embed practical safeguards while remaining accountable for results. It also helps senior sponsors balance innovation, risk and trust.

Prerequisite

- AI Essentials for Business knowledge or have equivalent experience

Included Online Courses

AI is already shaping business tools, workflows and decision-making. Yet many professionals lack the knowledge and confidence to use it effectively. Without a clear understanding of how AI works, its risks and its value, individuals risk falling behind and organisations miss opportunities for innovation, productivity and smarter decisions.

AI Essentials for Business is a foundational one-day short course that provides you with the knowledge, skills and tools to confidently harness AI in the workplace. You will explore core concepts, practical applications, ethical considerations and how AI is impacting businesses, while learning to distinguish between Generative and Agentic AI. Through experiential learning, you will discover how to integrate AI into daily workflows, use prompting strategies for impactful outcomes and build confidence in adapting to new tools.

Learning outcomes

Upon completion of this course you'll be able to:

- Define what AI is and is not, bust common myths and use key terms with confidence in daily conversations
- Distinguish between Generative AI and Agentic AI and apply their uses in business contexts
- Identify and compare leading Generative AI models and features to select the right tool for different tasks
- Apply Generative AI to spark ideas, streamline workflows and strengthen collaboration
- Recognise Agentic AI systems and demonstrate how they operate in realworld scenarios
- Make informed choices about AI by identifying ethical risks such as bias, confidentiality and alignment

Is this course right for you?

This course is designed for managers, team leaders and professionals who are beginning to encounter AI in their tools and workflows. It suits people in roles across operations, marketing, HR, finance and customer service who want to talk about AI with confidence, evaluate its impact and apply it responsibly.

User Experience (UX) Essentials

COURSE GUIDE**

ENQUIRE NOW

Effective UX design begins with understanding your users and making decisions guided by their needs, behaviours and expectations. The User Experience (UX) Essentials short course equips you with the foundational knowledge and practical skills to design intuitive, user-focused digital experiences.

Through hands-on activities and real-world applications, you will learn to apply the UX process from ideation to low-fidelity prototyping, create meaningful user personas and evaluate the usability of digital interfaces. With a strong emphasis on accessibility, user-centred thinking and clear communication of design intent, this course empowers you to make informed design decisions that drive engagement, satisfaction and better outcomes for both users and businesses.

Learning Outcomes

Upon completion of this course you'll be able to:

- Articulate the importance of user-centric design and accessibility
- Understand the implications of UI decisions on UX outcomes
- Apply the UX process from ideation through to prototyping and presentation
- Build user scenarios and personas based upon UX research
- Develop low fidelity prototypes to communicate your desired experience and validate solutions
- Evaluate the quality of websites and online products to identify clear areas for improvement

Is this course right for you?

This course is designed for individuals who understand the value of human-centred experiences and want to gain a comprehensive understanding of the end-to-end UX Design process.

It is ideal for professionals involved in designing or developing products and services that directly engage with users, catering to a broad and diverse audience.

Microcredentials are certifications of assessed competency in high-demand skills and knowledge areas that are industry-recognised and can be achieved in shorter timeframes than other AQF award qualifications.

Aligned with the individual units of our Vocational Qualifications, a Microcredential from AIM demonstrates the high standard of learning you have achieved and bolsters your career outcomes.

Your Microcredential can stand alone as an independant credential or be used as recognition towards an AIM Vocational Qualification.

QUALIFICATION MICROCREDENTIAL

Microcredential in AI Ethics and the Power of Critical Thought	30
• Microcredential in Applying AI, Machine Learning and Deep Learning in Practice	31
• Microcredential in Best Practice Cybersecurity	32
• Microcredential in Introduction to AI for Data Analytics and Forecasting.....	33
• Microcredential in Leveraging AI to Optimise and Elevate Business Operations	34
• Microcredential in Prompt Engineering Basics for Generative AI	35
• Microcredential in Understanding and Analysing Data	36

Microcredential in AI Ethics and the Power of Critical Thought

DURATION: 8 Weeks Access | Self-Paced

DELIVERY MODE: Online

STUDY LOAD: 4-5 Hours per week

PRICE: \$1,195

Successful completion of this Microcredential will result in the Statement of Attainment of NAT11287007 Apply critical thinking and Artificial Intelligence ethics.

BOOK NOW 

ENQUIRE NOW 

Delivery Mode

This Microcredential is delivered fully online through the myAIM learning platform to provide interactive learning content, and access to live virtually delivered seminars, drop-in coaching sessions, all completely online.

Designed to accommodate the schedule of fulltime working professionals, this Microcredential is highly accessible and provides a self-paced learning experience for participants.

Pathway

This unit is accredited and forms a pathway into the 11287NAT Diploma of Artificial Intelligence.

Upon successful completion of this Microcredential you can receive a credit and reduce the price and time to complete the Full Qualification.

Learning Outcomes

Upon completion of this unit you'll be able to:

- Establish the use of Artificial Intelligence (AI) technologies
- Establish the role of critical thinking
- Apply critical thinking processes

Time Commitment

Access to materials for 8 weeks and it is recommended that students commit approximately 4 to 5 hours per week to developing their competency through a range of learning, work-based skills testing and assessment activities.

Assessment

Within the AIM assessment model, competency is demonstrated through answering knowledge questions and completing workplace-based practical assessment tasks.

These tasks may include the need to utilise workplace-based activities involving others or participation in role plays.

Microcredential in Applying AI, Machine Learning and Deep Learning in Practice

DURATION: 8 Weeks Access | Self-Paced

DELIVERY MODE: Online

STUDY LOAD: 4-5 Hours per week

PRICE: \$1,195

Successful completion of this Microcredential will result in the Statement of Attainment of ICTAII401 Identify Opportunities to Apply Artificial Intelligence Machine Learning and Deep Learning.

DOWNLOAD COURSE GUIDE 

Who should undertake this qualification?

By studying the Diploma of Artificial Intelligence, students will be equipped to use AI technologies to enhance business outcomes. It’s designed to prepare non-ICT professionals with the practical skills they need to apply AI technologies in business roles.

By studying this course, graduates will be well prepared to write better prompts, use AI to analyse data, apply responsible AI techniques and more.

Units of Competency

These units of competency have been developed in consultation with industry experts along with our facilitators who draw upon real-life case studies and examples to ensure the knowledge you gain is practical and applicable to your role.

UNIT CODE	UNIT NAME
NAT11287001	Apply Prompt Engineering for Generative Artificial Intelligence Develop your understanding of how generative AI technologies work, craft more effective prompts that in turn get you better outputs from AI tools.
NAT11287002	Use Artificial Intelligence Technologies to Produce Engaging Content Build your skills in using AI platforms to help you create effective content, produce written, video and image-based content using a range of readily available AI tools.
NAT11287003	Analyse Data and Make Forecasts Using Artificial Intelligence Use AI technologies to help you effectively interpret and analyse data, use AI tools to aid you in developing meaningful forecasts and data-driven insights.

UNIT CODE	UNIT NAME
NAT11287004	Optimise a Brand's Digital Presence Using Artificial Intelligence Develop your skills in using AI technologies to analyse and improve a brand's digital assets, create, communicate and implement an AI improvement strategy.
NAT11287005	Use Artificial Intelligence Technologies to Enhance Business Operation Use AI-powered technologies to improve business operations and better business performance, identify opportunities for improvement, plan for enhancements and apply AI-based technologies to an operational area.
NAT11287006	Apply Artificial Intelligence Technologies to Improve an Organisation's Customer Experience Improve a business' customer service and customer experience using AI-based technology, gain skills in evaluating customer service performance, analysing AI technologies and introducing AI-based customer service improvements.
NAT10287007	Apply Critical Thinking and Artificial Intelligence Ethics Analyse a team's use of AI technologies and make recommendations for how these technologies can be used in more safe, secure and ethical ways.
ICTAII401	Identify Opportunities to Apply Artificial Intelligence, Machine Learning and Deep Learning Build your understanding of the similarities and differences between AI, Machine Learning (ML) and Deep Learning (DL) technologies.

Additional Information

For people looking to kickstart their business career or take it in a new direction, the 11287NAT Diploma of Artificial Intelligence (AI) can be completed alongside another qualification that builds skills in a specific area, such as leadership, management, HR or training.

Entry Requirements

To be eligible for enrolment at AIM into the 11287NAT Diploma of Artificial Intelligence qualification you must:

- be 18 years of age or older at the time of enrolment
- be technologically literate and have access to Microsoft Office suite or equivalent
- have continuous internet access
- have a Unique Student Identifier (USI) number (you can receive a USI or check if you already have one by [visiting here](#))
- have the ability to read and write English and display numeracy skills to at least Year 11 level (or equivalent)

For further details view the [AIM Student Entry Procedure here](#).

Derived directly from our leading Master of Business Administration program, individual units provide the ideal middle-ground for people who want a premier higher education without the associated commitment.

Single units allow you study when and wherever best suits you, gain valuable knowledge that aligns to your career goals, and discover your own first-hand experience of postgraduate study.

AIM's single units are also credit-bearing, meaning they will count towards a larger qualification if you choose to pursue one at a later date.

POSTGRADUATE MICROCREDENTIAL

Microcredential in Cybersecurity Governance	44
---	----

Microcredential in Cybersecurity Governance

DURATION: 7 Weeks

DELIVERY MODE: Online

STUDY LOAD: Average 18 Hours Per Week

PRICE: \$3,700

BOOK NOW ENQUIRE NOW 

Delivery Mode

This Microcredential is delivered fully online and students receive support from expert facilitators in the form of feedback to drive progress.

Our state-of-the-art online learning management system, myABS, offers a community approach to self-directed study and provides students with the opportunity to share their experiences, ideas, and questions through features such as live chat forums and integrated social media platforms.

Designed to accommodate the schedule of full-time working professionals, this Microcredential is highly accessible and provides a guided experience for students.

Learning Outcomes

Upon completion of this unit you'll be able to:

- Evaluate the benefits, opportunities and implications of cloud computing and its

related operations

- Assess the use of cloud technologies to create business value
- Distinguish between risk, threats and vulnerabilities that organisations may face with regards to cybersecurity
- Outline and classify the potential and severity for business implications brought about through emerging cyber threats
- Design and develop relevant policies and procedures to enable effective handling of incidents and vulnerabilities
- Lead the development of best-practice policies and procedures to proactively develop a culture of secure operational practice to prevent against cyber threats

Assessment

There are three assessment tasks for this Microcredential.

Assessment Task	Due Date	Length	% of Overall Grade Period
Report: Advice on the Cloud	Week 3	2500 words	35%
Report: Improving Cyber Security	Week 7	3500 words	50%
Engagement and Participation	Ongoing but completed by Week 7	10 multiple choice questions per topic	15%

MBA+

Get more. Go further.

The MBA+ is a fully accredited and nationally recognised Master of Business Administration presented by the Australian Institute of Management (AIM).

Having provided training and education to Australia's leaders since 1941, AIM is uniquely positioned to identify the needs of our students. Knowing the future is becoming increasingly uncertain, we have packaged up to 5 years of unlimited short courses in with our MBA, allowing you to upskill as you need while achieving a prestigious degree.

Get more from your career with a degree that goes the extra mile.

Talk to a Senior Learning Advisor today on **1300 658 337** or email **mba@aim.com.au** and discuss how the MBA+ can empower you for success.

PAYMENT OPTIONS

Increasing your knowledge through study is a great way to further your career, but sometimes the financial commitment can be a hurdle to getting started.

AIM is pleased to offer a number of payment options to assist you in up-skilling today.

1. Pay all costs up front
2. Defer all or part of the tuition costs by utilising AIM's finance partner, zipMoney
3. Funding options may be available in your state for certain vocational qualifications, please contact us for more information
4. Eligible students may apply for FEE-HELP, an Australian Government loan program, to pay all or part of their tuition fees for AIM's Higher Education postgraduate courses.

Online Short Courses Payment Method

We require full payment to be made upfront prior to accessing the Online Short Course. Payment can only be made via Credit Card (Visa/MasterCard/Amex).

ZIP MONEY

Thanks to AIM's new flexible payment plan with our finance partner, [zipMoney](#), achieving your dream to up-skill through our Short Courses, Vocational Qualifications or Postgraduate units is made all the more affordable, with increased payment flexibility, safe and secure transactions, and interest free payment periods.

Eligible students can access between \$2,000 and \$10,000 with a 6-month interest free period. For additional information about Zip Money and eligibility criteria, please visit zipmoney.com.au.

FEE-HELP

FEE-HELP is an Australian Government loan scheme that eligible students can access to cover part or all of the cost of the tuition fees of their Higher Education courses.

For more information on FEE-HELP and eligibility criteria, visit studyassist.gov.au.

Next Steps

Without financial barriers there's no reason to delay your study any longer. Talk to us today.

Email: studentsupport@aim.com.au

Phone: 1300 658 337

FAQ

When can I start?

With no fixed intake dates, you can enrol with AIM at any time. For more on how to enrol visit [AIM's student entry procedure](#).

How do I pay for my course?

The Australian Institute of Management Education and Training (AIM) offers a number of payment options for our Short Courses, Vocational Qualifications and postgraduate programs. Please note that for Online Short Courses payment can only be received upfront via credit card.

Please see AIM's [payment options here](#).

Do I need to pay extra for course materials?

Course materials and workbooks are included in your courses.

Are there any additional costs?

Any applicable additional costs are outlined on the [AIM website](#).

I wish to withdraw/cancel from my course, what next?

All withdrawal requests must be made in writing to AIM. AIM's [Withdrawal Deferral and Refund Policy](#) contains important information and outlines the steps involved.

Depending on your enrolment, separate policies and Terms and Conditions apply for Accredited Courses and Online Short Courses. For more information visit the [AIM website](#) or contact our Student Support Services for assistance.

What are Credit Transfer and Recognition of Prior Learning (RPL)?

Credit Transfer refers to credit granted on the basis of previously attained qualifications or units of competency. For more information, refer to AIM's [Mutual Recognition Policy](#).

Recognition of Prior Learning is the formal acknowledgement of your existing skills and knowledge. It's based on the premise that you do not need to undertake training for skills you already possess. Your current skills and knowledge may have been obtained through formal training, work experience and life experience. For more information, refer to AIM's [Recognition of Prior Learning Policy](#).

Are there any entry requirements for my course?

The entry requirements for each course are outlined within this Training Directory and can also be found on the [AIM website](#).

What are the study options for AIM's vocational qualifications?

- Online Study and support through self-paced, online modules

Studying online has never been easier or more convenient than through AIM's state-of-the-art virtual campus, myAIM. You can take each step of your qualification at your own pace, connect with others in online forums, and receive online learning support from AIM's Student Support and Coaching Services teams.

What is the study option for AIM's On-Campus Short Courses?

- The benefits of studying in a classroom setting include being able to share first-hand experiences, ideas and questions with peers and our expert facilitators. You'll study alongside like-minded people and strengthen your network.

What is the study option for AIM's Online Short Courses?

- Learning online gives you the flexibility to learn when you want, where you want, with 24/7 access to learning modules. Activities, reflections and case studies throughout the modules link your learning back to the workplace. The modules are accessed online by a student via AIM's online learning management system myAIM.

What is the study option for AIM's Virtual Learning Series?

- Through seminars hosted via Zoom, AIM's virtual learning series provides the practical immediacy of classroom workshops, such as asking questions of your facilitator in real time, with the accessibility provided by online learning.

What are the study options for AIM's Higher Education postgraduate courses?

- Online
Online learning provides flexibility and convenience, which is great for anyone constrained by time or distance. You can complete your qualification when it suits you and at your own pace.

Corporate Workshops

If you have several people wanting to study with AIM we can develop a program for your organisation including contextualising it to your own business or industry.

What equipment do I need to study online?

You will need an email account, a computer and basic software, such as Microsoft Word and, of course, a reliable high-speed Internet connection. If you don't have access to Microsoft Word, please use [Open Office](#) (free download).

Specific technology requirements are listed on each of the courses pages on the [AIM website](#).

When are the AIM workshops scheduled?

Information on workshop availability is available on the [AIM website](#).

Where can I find more information?

Separate Policies Procedures and Terms and Conditions apply for Accredited Courses and Online Short Courses. More information can be found on the [AIM website](#) as well on each dedicated course page within this directory and on the website.

**Built on experience, powered by evolution,
committed to excellence.**

Our Vision: To maintain our position as the most relevant leadership development organisation and future skills trainer in Australia.

Our Purpose: To use our 80 years of experience to prepare Australia for success in a rapidly changing environment and empower people with the skills and confidence to seize the future.
